NOTE:	Maximum acceptable draft at CD for a berth is basis the Lowest Astronomical Tide which is 0.0 mtrs. Higher berthing draft may be accepted basis the low water expected during the vessel stay at the berth.						
	For Example: If the Maximum acceptable draft for a given berth at CD is given as 13 metres and the height of lowest low water expected during the vessel's stay is 0.5 metres, then maximum acceptable draft for that berth will be 13.5 metres.						
	4. A Minimum u	nder keel clearan			aintained during cha	annel passage. A mi	nimum UKC of 0.3 to 0.5 mtrs will be maintained at all time when
	the vessel is alongside the berth.						
	5. Minimum depth in approach channel and manoeuvring basin for the month is as follows. a) MICT approach channel - 13.9 mtrs. b) South basin (AICTPL & ACMPTL) approach channel - 15.0 mtrs c) West basin approach channel -14.9 mtrs.						
	6. Drafts at which vessel can sail anytime (AMCT/MICT/SB/WB) Lowest Low water in Apr 19 : 0.62 mtrs. AMCT and MICT : Vessels with draft < = 13.2 M can sail anytime. South Basin (AICTPL & ACMPTL) : vessels with draft < = 14.2 M can sail anytime. West Basin : vessels with draft < = 14.1 M can sail anytime (Sub to Tidal Window) Above drafts are basis 10% UKC in the channel.						
	7. (a) Max acceptable LOA / Beam / Draft for IOCL SPM is 348 / 65 / 25 Mtrs (b) Max acceptable LOA / Beam / Draft for HMEL SPM is 345 / 60 / 23 Mtrs (c) Night berthing is restricted at both IOCL and HMEL SPM						
	8 Weather Parameters for berth (a) Cease berthing activity when sustained wind speed more than 30 kts. (b) Cease cargo transfer operation when sustained wind speed more than 35 kts. (c) Unberth ship if sustained when wind speed more than 40 kts.						
	9. Water Density	- Water Density	varies from 1.020	0 to 1.023 during SW <i>I</i>	Monsoon period. Ren	naining part of the y	rear it ranges between 1.024 to 1.025

Thanking you
